Numbers & Oddities

a.k.a. The Spooks Newsletter

Edition #218, November 2015

Editor: Ary Boender email: udxf@udxf.nl

Numbers & Oddities <http://www.numbersoddities.nl>

"Numbers & Oddities" a.k.a. the "Spooks Newsletter" is a newsletter for the members of the Utility DXers Forum (UDXF), the Spooks mailing list, HF Underground and everyone else who is interested in Numbers Stations.

"Numbers & Oddities" covers the fascinating world of Numbers Stations and other odd radio signals on shortwave.

Welcome to the 218th edition of Numbers & Oddities.

Besides the usual logs and transcripts you will find a book review of **The Cold War Spy Pocket-Manual** and an overview of the experimental Russian digital modes, compiled by Linkz, in Appendix 1. Further several unid stations which we would like to identify. Also interesting are two reports from Token indicating that V24 is possibly active again and his write-up about an unid new Korean station: V28. It is still too early to be sure if it is really a numbers station and where it comes from, North or South Korea, or maybe even China. In Appendix 2 you will find a list of Russia's monolith stations.

V24

V24 report by Token.

25 November:

I received an email yesterday asking me to listen to a recording to see if it was a possible V24 transmission. V24 was last known active on June 16, 2015.

The recording was apparently done at 1137 UTC, November 25, 2015, on the Hong Kong GT remote node. Frequency was 6215 kHz. The recording consisted of about 45 seconds of a female Korean pop group called Girls Generation, doing a portion of a song called Into the New World. No numbers were included in the recording.

6215 is a long used V24 frequency, going back to the late 1970's or early 1980's. There are no known or scheduled broadcast stations on that frequency.

I told the person asking that because there was only music present there was no way to tell if it was associated with V24 or not. Of course it could be, but there was no real indication there was any relation to V24. The choice of frequency and the pop Korean music (a habit V24 was starting to get into just before it ended) could possibly indicate V24 involvement, but only a mild "maybe".

However, I started looking at the frequency periodically from that point on. Since that time, 1137 UTC, Nov 25, to this time, 0600 UTC, Nov 26, the station has more or less continually transmitted the same song, "Into The New World", by Girls Generation, in a loop, now going on over 18 hours. There was a short period around 0200 UTC when it was just a carrier, or sometimes test tones on the transmission, but by 0210 it was back into the same song.

Could this be the V24 transmitters coming back into play? Only time will tell, but if you monitor Asian stuff you might want to occasionally check the old V24 frequencies (last active freqs were 4900, 5290, 5715, 6215, and 6310 kHz) to see if V24 is being reactivated.

26 November:

Over 24 hours later and the same song is still in a playback loop on 6215 kHz. At this time, 1320 UTC, November 26, 2015, 6215 is still playing a loop of Girls Generation, "Into the New World". Could this be a burn in period for a new transmitter?

I should take my own advice, "check old V24 frequencies", something I did not do until this morning. The same audio loop is playing on 4900 kHz (and still active on 6215 kHz), another historically active V24 frequency. I strongly suspect this is a test of new transmitters or facilities, and that V24 will be back in the near future.

28 November:

I have uploaded videos of the music on both 4900 and 6215 kHz. Of course, it is not very interesting because it is just music. But it was the same music sent, just one song repeatedly, for over 36 hours on two past V24 frequencies. The two frequencies were simulcast, there was no apparent delay between them other than normal propagation caused delays.

Propagation conditions and direction of arrival were consistent with past V24 transmission.

4900 kHz here: <https://www.youtube.com/watch?v=tpGCPxdmdqc>

6215 kHz here: <https://www.youtube.com/watch?v=mCRvyX1FEys>

Both frequencies here: <https://www.youtube.com/watch?v=rYfpDscKLDE>

TI, Mojave Desert, California, USA

V28

Token reports about a possible new Korean numbers station.

There is a possible new numbers station out of Asia that has periodically been reported on a few different lists for the last few weeks.

The station appears to be Korean language. It uses both an OM and YL voice. The schedule seen so far is roughly 3277 kHz, AM mode, at 1330 until about 1340 UTC, on 3277 kHz AM. The frequency varies slightly, but it is normally about 3277 kHz.

The format of the 3277 kHz transmission is not yet defined, and appears to be somewhat flexible. Several Korean speakers think the station is North Korean based on the accent of the female voice. However at one time that (North Korean accent) was also said of V24, and we know that station was South Korean.

Unfortunately the 3277 kHz station is very weak at my location, so the only way for me to hear the station is on Asian remotes. Since 1330 UTC is 0530 local time this is an inconvenient time to access remotes, as I am generally on my way to work at that time. I suspect I am going to be able to do little with this station and we are going to have to rely on Asian contributions to find out more.

My newest recording of this station is here: <https://www.youtube.com/watch?v=AUqOkQjVcto>

My logs for the new unid Korean language numbers station:

3277.12 kHz AM 1330z 22 November 2015 (remote tuner Japan) Token SUN
3276.84 kHz AM 1330z 23 November 2015 (remote tuner Japan) Token MON
3276.93 kHz AM 1330z 24 November 2015 (remote tuner Japan) Token TUE
3276.95 kHz AM 1330z 25 November 2015 (remote tuner Japan) Token WED
3276.91 kHz AM 1330z 26 November 2015 (remote tuner Japan) Token THR
3276.89 kHz AM 1330z 27 November 2015 (remote tuner Japan) Token FRI
3276.93 kHz AM 1330z 28 November 2015 (remote tuner Japan) Token SAT

The transmitter seems stable once tuned, but every day is a slightly different frequency of about 3277 kHz. Is it possible this transmitter has an analogue scale for frequency? These kind of minor variations in tuned frequency, but stable operation, are reminiscent of analogue operations.

From now on I will just report the frequency as 3277 kHz, however I wanted to document the variations.

This station is very difficult to hear at my location, so far any decent reception I have had has only been using Asian remotes.

I have looked in other time periods, but so far have not found any other schedules.

Chinese oddity station VC03 has been active on the same frequency in LSB. VC03 also apparently has a digital mode it uses. Because of this my best recordings are in USB mode, despite the new station being an AM transmission. The audio is distorted, no matter what reception mode is used.

My newest, and best to date, recording (Nov 28, 2015) here: <https://www.youtube.com/watch?v=beniy0e8wLI>

HM01 oddities

10715 kHz, 1-11, 2155 UTC	Started but stopped after couple callup groups. Then tuning tones and into msg for 1st callup group
11435 kHz, 2-11, 1606 UTC	Into RDFT, skipped the tuning tones, then 32432 32231 53875 61431 36887 67788
11435 kHz, 7-11, 1603 UTC	Tuned xmtr. Stopped and resumed in RDFT, no callup or tuning tones. 85760 10606 335366 57673 23835 14033
11435 kHz, 15-11, 1603 UTC	Tuning xmtr at 1603z then 48083 43333 32436 32234 53879 61435. Note: Did not send callup nor tuning tones
11435 kHz, 26-11, 1555 UTC	Transmitter tuned at 1555z. Transmission started at 1633z, 35 mins late. 17071 53765 72359 31576 81683 48864
11530 kHz, 26-11, 1658 UTC	Music briefly. Then 22222, tape hung up. Carrier goes off at 1702z. Back with rptd 22222 and then 17071 53765 72359 31576 81683 48864
11435 kHz, 29-11, 1607 UTC	17071 53765 72359 31576 81683 48864. Note: Tuning tones were not sent

M42 & X06

Modes:

Various digital modes, CW,
Tones (Мазелка / Mazielka)

Russian Government & Intelligence

M42 – various modes

The Russian are experimenting with a number of new digital modes. Linkz compiled a number of them. See the Appendix for the details.

Thanks to Linkz, Danix and André for the following logs, recordings and picture.

The 17-tone OFDM/MPSK waveform is the same as in this video: <https://www.youtube.com/watch?v=TpJiBrQckJY>

Courtesy of Linkz

11517 kHz, 11-11, 0950 UTC FSK + 17-tone OFDM/MPSK + BPSK 250Bd. Burst every 10 secs.
12087 kHz, 11-11, 0945 UTC, FSK + 17-tone OFDM/MPSK + BPSK 250Bd. Burst every 10 secs.
13536 kHz, 11-11, 0940 UTC, FSK + 17-tone OFDM/MPSK + BPSK 250Bd. Burst every 10 secs.

Explanation of the line format as used by M42c (FSK 200/500)

=83269 967768160259101149
123 4 5 6 7 8

1. Indicator whether the message continues ("=") or ends here ("").
2. "7" or "8" if #1 is "=", and "5" or "6" if #1 is "".
3. Unknown, depends on line content. Always 2 digits.
4. Line number, occupies three characters. Padded with spaces afterwards if less than 3 digits.
5. 5-digit group #1.
6. 5-digit group #2.
7. 5-digit group #3.
8. Unknown, depends on line content. Up to 3 digits. Padded with spaces afterwards if less than 3 digits.

Each message always ends 00000, and if there are remaining 5-digit group slots, they're filled with +++++.

If more than one message in a transmission is delivered, they are separated by at least one line containing "0000000000000000".

Note that there are no line breaks internally.

The final 5-figure group consists of the message number and group count. This group is not included in the group count. So the number of groups in a message is the group count + 1.

Example:

Final group: 22093 means message nr 22 and 94 5-figure groups in the message.

The Cold War Spy Pocket-Manual

The Official Field-Manuals for Spycraft, Espionage
and Counter-Intelligence 1945-1968

Compiled and introduced by Philip Parker

ISBN: 9781910860021

Format: Hardback

Publisher: The Pool of London Press

*"We were both at the appointed place on time at 4:00 PM. He had the green book
and the tennis ball and I had the four gloves..."*

It may sound like a line from an Ian Fleming novel but this is a quote taken from
official handover notes from the KGB to their agent handlers in the US and their
first meeting with agent Klaus Fuchs. The date: 1945 - the start of what was surely
the golden age for espionage, the Cold War years.

Spy books and spy movies are quite popular these days. One of the new spy books is *The Cold War Spy Pocket Manual*, edited by former British diplomat Philip Baker. This book is somewhat different from other spy books because it is not the average spy novel nor does it cover the standard spy stories and agency info. The book is a combination of stories about spy operations, stories about defectors and manuals and directives from Soviet, East German, British and American intelligence agencies. A rather unusual but interesting combination.

Contents:

- In the early 1940's Camp 020, near Ham Common in Richmond, was set up by the British MI5 as an interrogation centre for enemy spies. The interrogation techniques used in Camp 020 were published in a document called *A Digest of Ham*, as guidelines for future use by the intelligence agencies and are now included in the Pocket Manual.
- Part of *The Official CIA Manual of Trickery and Deception* is included in the book. It gives some info on recognition signals and more. How to make contact when both parties do not know each other, or only one knows the other.
- *The Prikhodko Lecture*, written by Lieutenant-Colonel Ivan Prikhodko, of the GRU's Anglo-American Affairs Directorate, provides a manual for Soviet spies operating in the USA. It includes the characteristics of agent communications, guidelines for the use of VHF radio, dead drops and other ways to communicate.
- I found the *Undercover Residency* item the most interesting part of the Pocket Manual. It is written by Viktor Suvorov, which is the cover name of Vladimir Rezun who was a major in the GRU.

The undercover residency is one of the basic forms of intelligence set-up for the GRU abroad. In every country where official Soviet representation exists there is a GRU undercover residency. Suvorov describes in detail how an undercover residency is set up and more importantly the roles of the various staff members like the Operational Officer, the Radio / Cipher officer, the Radio Monitoring Station Officer, the Technical Services Officer, etc.

As a radio enthusiast I am of course interested in the communication items. I learned that the Radio / Cipher Officer was the second important person in the residency. He was so important that no-one was allowed to enter his radio/cipher room, not even his boss or the ambassador. He was only allowed to live in official Soviet embassy accommodation and was guarded around the clock. Neither the officer or his wife is allowed to leave the guarded territory. So in fact he was living in a cage. Not a nice life in my opinion. That is the reason why a deployment lasted no more than two years.

- *The Vassiliev Notebooks*.

After the Cold War, the SVR decided to allow limited access to the KGB's archives to foreign publishers working with retired KGB operatives. One of the operatives is Alexander Vassiliev who compiled a number of notebooks which were later smuggled out of Russia. The notebooks concentrate on Soviet-American and Anglo-American affairs, including the Manhattan Project, which is described in Vassiliev's Yellow Notebook #1.

The Manhattan Project was a research and development project that produced the first nuclear weapons during World War II. It was led by the United States with the support of the United Kingdom and Canada. The US papers about the Manhattan Project have been declassified and can be found here: https://www.osti.gov/opennet/manhattan_district.jsp

- *Berlin*.

I guess that many of us are familiar with the stories about the Berlin Tunnel, a 300 metre long tunnel across the east-west border, dug in 1954 by an Anglo-American intelligence team to tap East German telephone lines. That was only one of the many western intelligence activities in Berlin during the Cold War. In November 1958 the STASI published their assessment of western intelligence operations in Berlin. The assessment covers the activities of the British, West German, French and American intelligence agencies in Berlin. Both the discovery of the tunnel and the STASI assessments are described in the Pocket Manual. Below excerpts from the part about the French intelligence activities:

IV. French secret service:

Sûreté National – organizes counter-espionage – above all [against the] MfS – [Unger [name]] West Berlin, Müllerstraße, uses violence in interrogations.

DR[11]/Marine – works on Baltic coast – chiefly via Hamburg.

DR/SR[12]: (a) army (b) air force (c) political and economic espionage

Strict separation of responsibility.

Main base in Germany: Baden-Baden.

French are making preparations for withdrawal.

Equipping agents with radio sets.

Aids:

Japanese tissue paper (Seidenpapier)– shoes with hollow sole – radio sets – winder and board which opens out as well as Morse key. [handwritten note: [agent] does not need to be a radio operator]

Radio sets with tape just like the Americans.

Characteristic features:

French secret service is currently generous with financial resources – pays in advance monthly salary for one year, makes agents buy motorbikes and radio sets

- The final chapter of the book covers KGB's basic instructions for checking agents and includes a chapter of Vladimir Kuzichkin's book *Inside the KGB*. Kuzichkin was a Major in the KGB and was deployed in Iran. He escaped to Turkey with the help of the British MI6. The British brought Kuzichkin in contact with the CIA, which in turn contacted the government of Iran. His information led to the arrest of nearly 20 Soviet KGB field officers in Iran.

Conclusion:

I have read many books about espionage but this book is different from most other spy books. The inclusion of directives and manuals from various intelligence sources is why *The Cold War Spy Pocket Manual* is an interesting, informative, and entertaining book.

Appendix 2

RUSSIAN MONOLITH STATIONS

Numbers & Oddities – www.numbersoddities.nl

Utility DXers Forum - UDXF - www.udxf.nl

The radio stations of the Russian Central Military Command are using priority codes and message formats from the Soviet days. They are described in the following document:

МИНИСТЕРСТВО ОБОРОНЫ СССР
РУКОВОДСТВО ПО РАДИОСВЯЗИ
ВООРУЖЕННЫХ СИЛ СССР

Ministry of Defense
RADIO GUIDE
Soviet Armed Forces

Часть 2

part 2

ПРАВИЛА РАДИОСВЯЗИ
*Введено в действие директивой
Генерального штаба Вооруженных Сил СССР
от 19 мая 1986 года № 177/24/0945*

RADIO REGULATIONS
*Enacted Directive
General Staff of the Armed Forces of the USSR
on May 19, 1986 № 177/24/0945*

The priority codes are described in chapter 1:

9. По важности и категориям срочности информация делится на следующие виды: сигналы боевого управления и оповещения; радиограммы категорий срочности «Монолит», «Воздух», «Ракета», «Самолет», и «Обыкновенная».

Сигналы категории срочности «Воздух» передаются вне всякой очереди после передачи всех видов сообщений категории срочности «Монолит».

Радиограммы различных категорий срочности передаются в такой последовательности:

«Монолит» - с перерывом передачи и приема сообщений всех других категорий срочности;

«Воздух» - после радиограмм категорий «Монолит» с перерывом передачи и приема радиограмм категорий срочности «Ракета», «Самолет» и тегорий срочности «Ракета», «Самолет» и «Обыкновенная»;

«Ракета» - после радиограмм категорий «Монолит», «Воздух» с перерывом передачи и приема радиограмм категории срочности «Самолет», и «Обыкновенная»;

«Самолет» - после радиограмм категорий «Монолит», «Воздух», «Ракета», с перерывом передачи и приема обыкновенных радиограмм.

Радиограммы категории срочности «Обыкновенная», передаются после радиограмм категории срочности «Самолет» в порядке их поступления.

При работе по открытому радиоканалу проставленная на радиограмме категория срочности кодируется по Таблице дежурного радиста или другим установленным порядком.

При работе с использованием международных позывных категория радиограммы передается открыто в сокращенном виде: «Монолит» (мнл), «Воздух» (взд), «Ракета» (ркт), «Самолет», (смл) и т. Д.

The priority codes are used both in full and shortened form.

Long form	Short form	English	Description
Монолит / Monolit	mnl	Monolith	The most urgent level, interrupts all traffic
Воздух / Vozdukh (Wozduh)	vzd (wzd)	Air	Interrupts all message types except Monolit
Ракета / Raketa	rkt	Rocket	Interrupts Samolet and Obyknovennaya messages
Самолет / Samolet	sml	Airplane	Interrupts Obyknovennaya messages
Обыкновенная / Obyknovennaya		Regular	

The formats of the messages is fully explained in chapter2 of the document. The document (in Russian) can be downloaded from the N&O website.

These flash messages are similar to the US NMCC Emergency Action Messages (EAM's). They are transmitted in voice, Morse and RTTY by Army, Navy and Air Force stations.

The most common format is: Callsign of the receiver xx xxx code word xx xx xx xx
Example: MDZhB 19 186 DIASPOR 62 47 13 50

Note that the callsign of the receiver is often a generalr callsign, like MDZhB. They are used to call all stations in a certain area or to call stations that belong to a certain command chain. When a specific station is called then the callsign belongs to that specific station is sent. Example: KARTA-11 98 255 KONOVID 5620 4081.

Morse flash messages begin with "XXX XXX". Examples: XXX XXX WEGI WEGI 70709 50277 KLOPOMOR 3277 2208 K and XXX XXX 1QRF 1QRF 52004 AMFIOBENY 8207 4863 ANALOJNYJ 3557 3950 K

Note that the general callsign MDZhB is also used in morse. The Russian morse character for the letter "Zh" is "B", so the callsign is MDVB. Example: XXX XXX MDVB MDVB 05282 MELOTIPI'A 39878693 DEKANTACI'A 73280877 K

VOICE STATIONS

In radio hobby circles the Russian Central Military Command stations that transmit the above mentioned priority codes and flash messages are called ***Monolith stations***. Some of these stations are well known to many people while other stations are not often logged. Below the list of the most reported voice stations.

Designator *)	Nick name	Channel marker	Callsign	General callsign	Frequency in kHz	Location
S28	Buzzer	Buzzing sound	Vulkan	MDZhB	4625, 6998	St. Petersburg and Moscow
S30	Pip	A single dot in morse	Akaciya	8S1Shch	3756 (night), 5448 (day)	Rostov-na-Donu
S32	Squeaky Wheel	2-tones			3828 (night), 5473 (day) Sometimes also on 7009 (day)	Probably Rostov-na-Donu
MX		“R” in morse		Plovets-41		Possibly Ekaterinburg
S6930				Katok-65	6930, 3218.5	
S5426				Arbat-50	5426	
S5292		“B” or “D” in morse		Fazan-37	5292	DFs point to a location NE of St Petersburg
S5790				Patron-79	4790	
S3850		Dash		Baron-78	3850 (night), 4940 (day)	Possibly Novorossiysk
S4525		Dash			4525	

*) Designators were assigned by ENIGMA, ENIGMA 2000, Priyom, Numbers & Oddities
