

Unid 10-minutes Network (UM10)

Revision date: 13 April 2014
© Utility DXers Forum www.udxf.nl

This network is possibly located in east Russia or the north east of China. Most reports are coming from Alaska, Japan, and Siberia.

Until we know who they are we'll put the net in the database as "UM10" (Unid Morse 10-minutes net).

Typical are the transmission schedules. They last for 10 minutes and consist mainly of a callsign and sometimes hand keyed Morse messages. These messages often are three to six 2-digit groups like these: "VVV DE VTID //74// //42// //63//" or "= 83 52 48 ="

The network changes its frequencies and callsigns at least once each month. The transmission times also change at times.

The frequencies and time slots are not necessarily the ones that are being used now but they indicate in what time slots and on what frequencies the station has been heard.

The stations tend to use the same frequency pool over and over.

Schedule 1	Schedule 2	Callsign	Frequencies
05-15	35-45	DEJF	3753
05-15	35-45	ZJL4	3809
